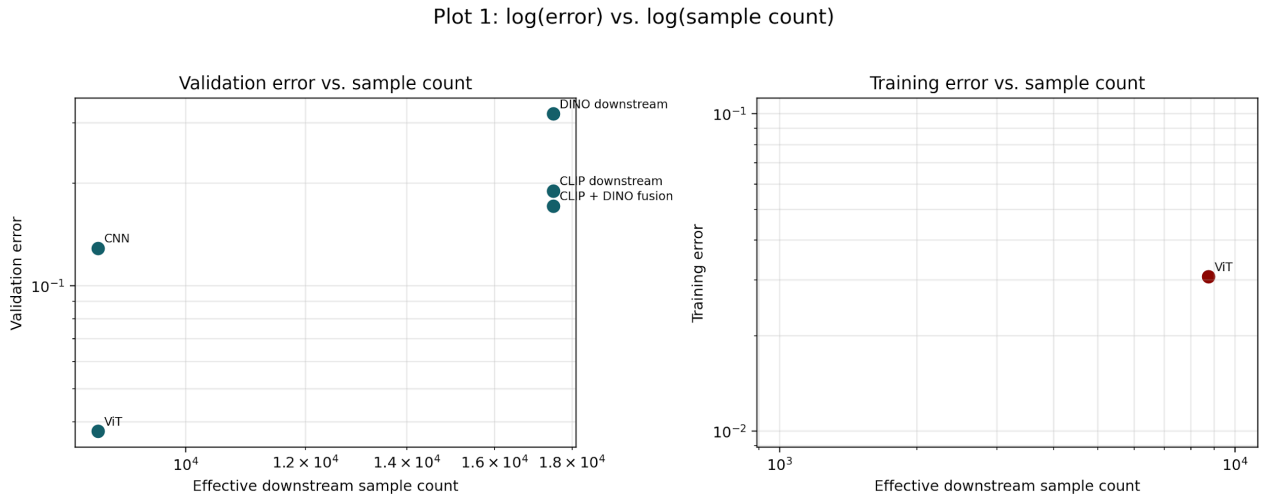
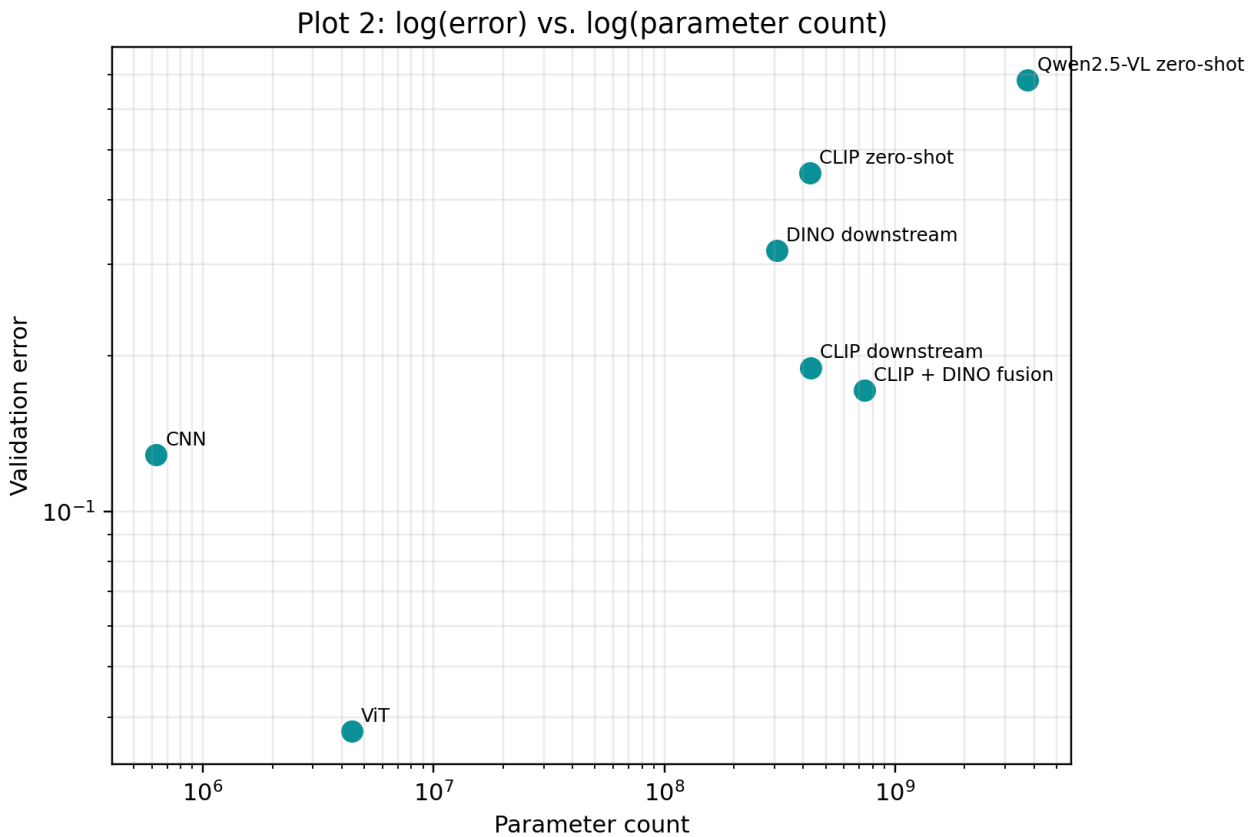
CS148a Bonus Assignment

Om Sanan

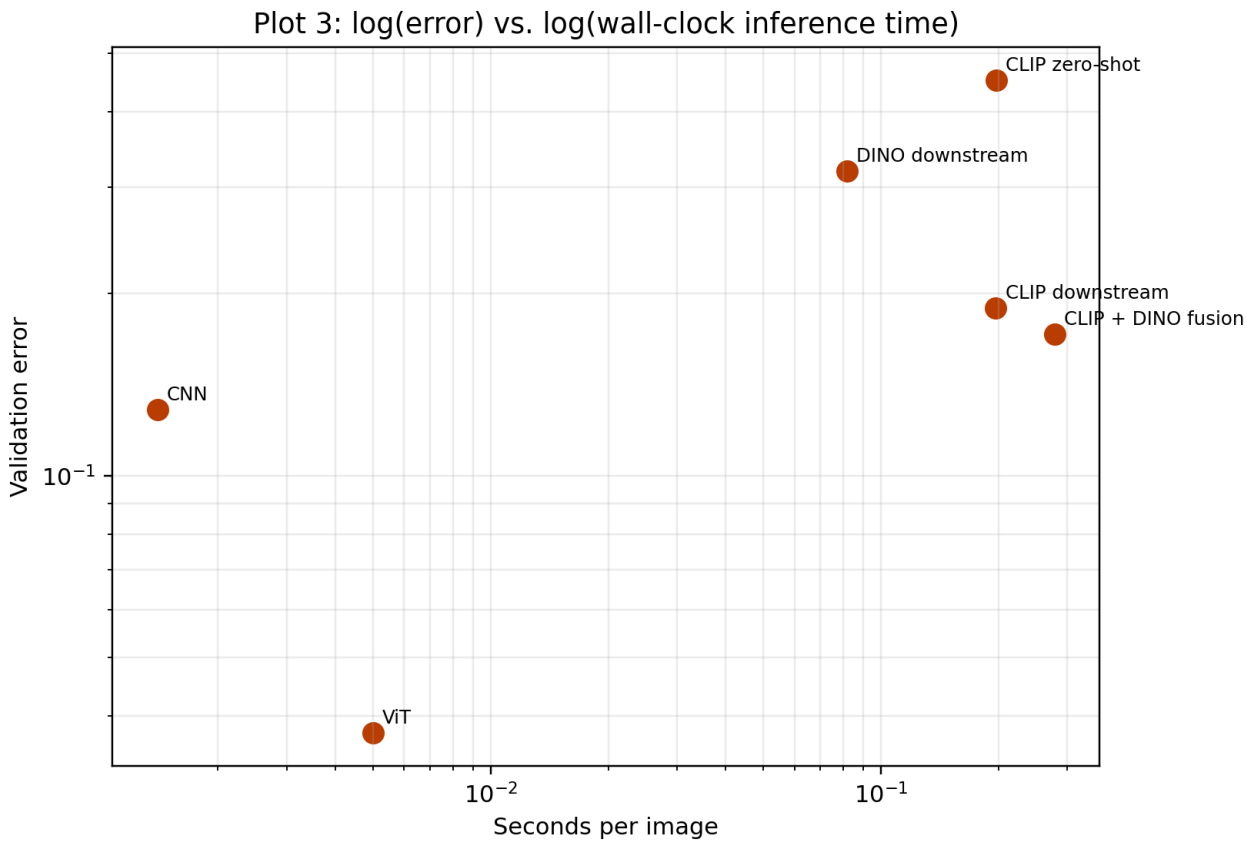
Figures



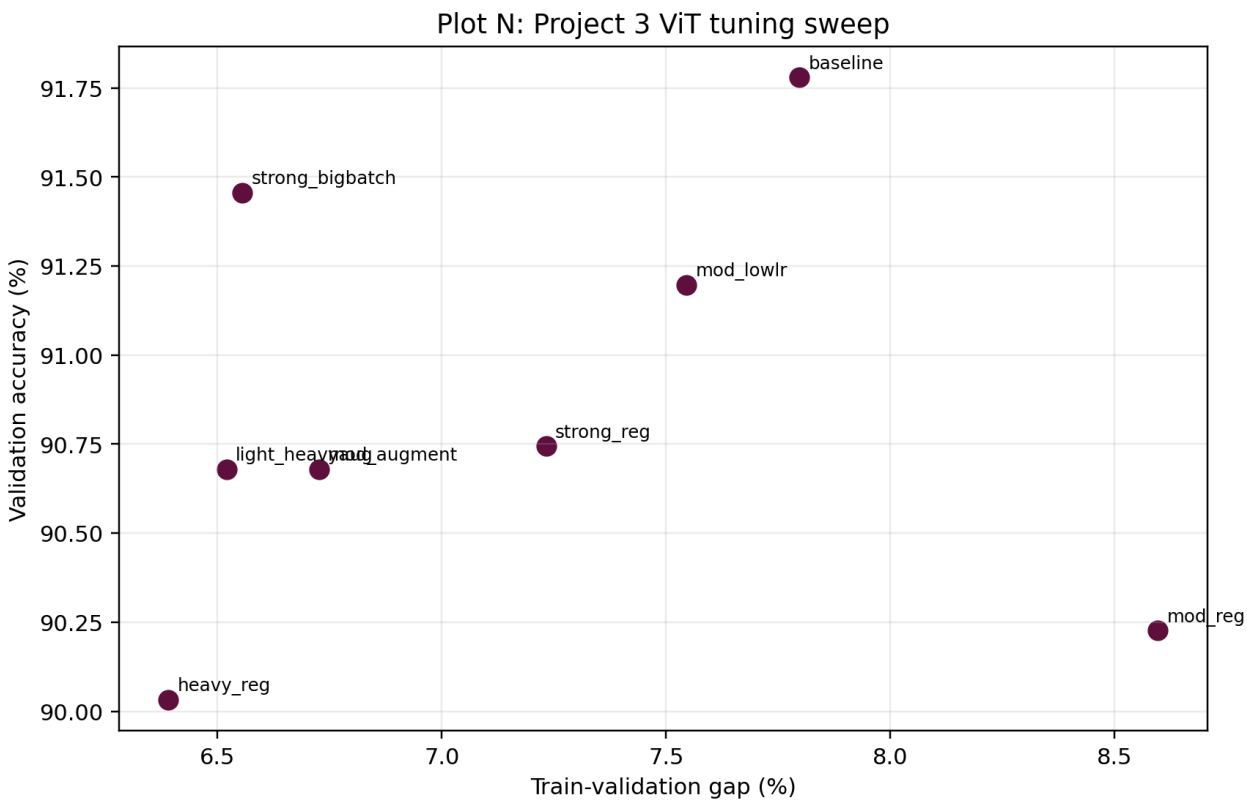
Validation and training error against effective downstream sample count. Zero-shot models are excluded because log(0) is undefined.



Validation error against parameter count across the CNN, ViT, and Project 4 foundation model variants.



Validation error against measured CPU inference time per image. Qwen is omitted because no CPU timing run was performed.



Project 3 ViT tuning sweep showing that a smaller train/val gap did not always produce the best validation accuracy.

AI Usage

OpenAI Codex was used to support the creation of the plots above once I review and gave it proper models/code from the past projects. All outputs were manually reviewed. Codex doesn't have chat logs.
